MINIMISING POINTS OF FAILURE – ASSURING SAFETY & RELIABILITY.

The AF1 is the introductory model of vehicle control and management system from RFDDesign. The AF 1 has integrated multiple redundancy solutions designed to provide safety and reliability in a highly configurable package.

MINIMISING POINTS OF FAILURE.

AF1 is able to cope with most single failures and several dual failures.

Safety & reliability assured.

2 independent and isolated canbuses giving high noise immunity

Short and open bus redundancy – simplifying the wiring.

Any power failure is isolated; alternative power provided, securing the system against voltage fluctuations and short circuits.

Failure isolation and self-correcting platform.
